Payment System Product Codes

May 12, 2022

Version 4.1

CONEXXUS
solve forward

Document Summary

This document describes the Payment System Product Codes recommended for use by electronic payment systems within the petroleum/convenience industry.

Introduction

From pay-at-the pump, to paperless transactions with vendors, to tracking consumer sales patterns through point-of-sale data, to future undetermined uses, technology promises greater business efficiencies for the convenience store and petroleum marketing industries.

Standards greatly facilitate the interoperability of technology applications. The Conexxus Retail Financial Transactions Committee, originally part of the NACS Technology Standards Project and then the Petroleum Convenience Alliance for Technology Standards, generated this set of recommended product codes. Subsequently, these Payment Product Codes were adopted as part of the X9 standard for terminal-to-host messaging (first as TG-23 and later as X9.104 Part 2). They have has been maintained sequentially by NACS, PCATS, and now Conexxus; Conexxus is the official Registration Authority, approved by ASC X9, Inc., to maintain these codes as part of X9.104.

These product code definitions are for use in electronic payment systems formats. These codes define petroleum and merchandise products and services by assigning them a specific three-digit number. Host payment systems, along with vendors, are encouraged to adapt their systems to utilize these codes so that standard product definitions are maximized for the benefit of all users.

Conexxus maintains this set of product codes and updates them as necessary. In order to facilitate this maintenance and still provide maximum flexibility for individual vendors and networks to use these codes, two sets of undefined code categories exist. The first is for the exclusive use of Conexxus in making future changes. The second is for the proprietary use of the vendor community to add codes outside the adopted list. Notwithstanding such private use opportunities, Conexxus encourages vendors to submit new generic product codes so that the list may reflect the most up-to-date codes in use throughout the industry and continue to achieve the goal of standard product definitions.

Version 4.1 resulted in the addition of ten diesel codes, including codes for additional biodiesel blends, renewable diesels, and additized diesels. This is a minor update.

Deprecation

In Version 4.0 there were codes marked to be deprecated. Deprecated code values may be reused by Conexxus in future versions of this document. Therefore, vendors and host networks should plan to modify systems to use alternate codes. Direct any feedback on deprecated codes that may require reconsideration to info@conexxus.org.

Introduction of New Codes

Codes added to this document may not be available in all environments. It is the responsibility of the user (merchant, vendor) to ensure that the codes have been adopted through all necessary interfaces and systems (including issuers and processing networks).

Dyed Fuels

The term "dyed fuel" refers to the practice, in many markets, of adding dye to non-taxable fuel. The dye is added so that a vehicle tank can be checked to verify that the driver has purchased the correct fuel for the purpose intended. We do not use the term dyed within the Payment System Product codes because use of dye is not a universal practice. If a dyed fuel product is needed the non-taxable fuel product code for that product should be used.

Diesel When Taxable and Non-Taxable Fuels Are Sold From the Same Dispenser

There are over-the-road implementations where one dispenser may dispense both taxable and non-taxable fuels in a single transaction. For example, a vehicle which has a diesel-powered refrigeration unit would buy taxable fuel for use in the main fuel tank (to drive the vehicle) and non-taxable fuel to power the refrigeration unit. The site system will be responsible to indicate a taxable fuel line item separately from the non-taxable fuel line item.

Auto Diesel and Commercial Diesel

The same fuel is used for both auto and commercial diesel applications. For implementations that need to differentiate the location from which and/or how the fuel is delivered, it is recommended that the service code be utilized. A new service code for “high-speed” fuel delivery is being introduced to address this need. (Note: Auto diesel may use either full or self).

Biodiesel

"*Biodiesel is a renewable, biodegradable fuel manufactured domestically from vegetable oils, animal fats, or recycled restaurant grease. Biodiesel meets both the biomass-based diesel and overall advanced biofuel requirement of the Renewable Fuel Standard.*"[1] Biodiesel is usually sold blended with traditional diesel fuel.

Note that there are biodiesel blends (both taxable and non-taxable) at 1%, 2%, 5%, 10%, 11%, 15%, 20%, 75%, 99% and 100%. The intention is that the percentage listed at the pump indicates that the maximum percentage of biodiesel in the blend.

The labels used on the dispenser must meet all local requirements.

Renewable Diesel

"Renewable diesel and biodiesel are not the same fuel. Renewable diesel, previously known as green diesel, is a hydrocarbon produced most often by hydrotreating and also via gasification, pyrolysis, and other biochemical and thermochemical technologies. It meets ASTM D975 specification for petroleum diesel. Biodiesel is a mono-alkyl ester produced via transesterification." [2]

There are 2 renewable biodiesel blends (both taxable and non-taxable) included:

- Greater than or equal to R95, Biodiesel 1%-5% meets ASTM D975
- R80 to R95, Biodiesel 6%-20% meets ASTM D7467

The labels used on the dispenser must meet all local requirements.

Cannabinoids

Cannabinoids have been legalized in some markets where Conexxus Payment System Products Codes are in use. As a result, product codes for Cannabinoids have been added (700-719). However, it is strongly recommended that the allotted product codes only be used by merchants selling in markets where Cannabinoids are legal in order to avoid any violations of applicable laws.

This version is a minor release (the codes that are reused were deprecated in version 3.7)

Release Notes for Version 4.1

Additions of Taxable Diesel Product Codes:

- 052: B1 Diesel Blend 1% Biodiesel
- 061: Renewable Diesel (Biodiesel 6%-20%) (meets ASTM D7467 in US)
- 053: Additized Diesel #2
- 054: Additized Diesel #3

Additions of Non-taxable Diesel Product Codes:

- 333: Renewable Diesel (>=R95) (Non-Taxable) (meets ASTM D975 in US / EN 590 in Europe) Off-Road (Non-taxable)
- 334: Biodiesel Blend 1% Off-Road (Non-Taxable)
- 335: Biodiesel Blend 75% Off-Road (Non-Taxable)
- 336: Biodiesel Blend 99% Off-Road (Non-Taxable)
- 337: Biodiesel Blend 100% Off-Road (Non-Taxable)
- 338: Renewable Diesel (Biodiesel 6%-20%) Off-Road (Non-Taxable) (meets ASTM D7467 in US)
